

SYNTHETIC DEVELOPMENT DRAFT — unsent request; recipient/data-holder contact UNKNOWN.

## **Proposed request to the responsible data holder**

Please identify the governing rights holder, permissible access pathway and applicable license conditions for the synthetic comparison's original analysis record. We seek an authorized way to inspect the paired-unit analysis script, unit conversion and repetition-averaging rules, resample count, seed, software/environment record and bootstrap outputs to assess the reported target interval. Numerical unit data should be accessed only if necessary and if a separate license-compatible authorization permits it.

The existing fixture license prohibits redistribution of raw unit-level records and identifiers. This request is not permission to email, deposit, upload or redistribute them, and makes no assertion that a controlled-access arrangement is already approved. If inspection cannot be authorized, please confirm what non-identifying metadata, aggregate summaries and original analysis code may be provided legally.

Author/data-holder response, recipient, safeguards, any expanded permission and access approval: UNKNOWN. Nothing has been sent or requested through an external service.
